

REMARKS

Applicant appreciates the Examiner's teaching and in full compliance therewith respectfully submits this amendment. There are no arguments presented in this amendment.

Allowable Claims 1 and 2

Examiner taught Claims 1 and 2 would be allowable if rewritten to overcome the rejection under 35 U.S.C. §112. As suggested by the Examiner, Applicant has added "*and seat*" after "isolate" to overcome the rejection.

Objection to Invention Title

As taught by the Examiner, Applicant has amended the invention title to "LIFT TYPE WEIGHT MEASURING *CENTRIFUGE*" to be drawn to the claimed *CENTRIFUGE*.

Objection to Abstract

In compliance with the Examiner's teaching, Applicant has amended *Abstract* to meet 37 C.F.R. §1.72(b) in separate sheet.

Objection to Description

Applicant has corrected all minor errors in *Description* and attached *Clean Version* in addition to *Marked-up Version* to help streamline further procedures of the application.

As shown in *Marked-up Version*, all the figure labeling errors have been corrected. Specifically, FIGS. 6a, 6b, 8a, 8b are corrected to read FIGS. 6, 7, 9 and 10 throughout *Description* so as to correspond to the labeling in drawing sheets.

Labels for cross sections are corrected throughout *Description* and drawings sheets. In specific, "C-C" is corrected to "V-V" in FIG. 4 because its cross section view appears in FIG. 5. "B-B" is corrected to "IX-IX" in FIG. 3 because its cross section view appears in FIG. 9. Also, "A-A" is also corrected to "II-II" in FIG. 1 because its cross section view appears in FIG. 2.

Applicant has completely reviewed reference numerals throughout the description and drawings and corrected typos. Two elements, specifically, "centrifugal motor 322 ~~320~~" and "upper horizontal frame 442 ~~440~~" were found labeled wrong once each and corrected in the specification. No new matters are added.

Objection to Drawings

Drawings sheets attached herewith are each labeled with "Replacement Sheet". One-to-one correspondence between specification and drawings was thoroughly checked. All the referenced numerals shown in drawings have been identified to appear in description.

FIG. 1 is labeled with “Prior Art” and cross section lead lines were corrected and cross section label “II-II” has replaced “A-A”. *FIG. 2* is labeled with “Prior Art”. *FIG. 3* is corrected to carry appropriate cross section lead lines and label “IX-IX” replacing “B-B”. *FIG. 4* is corrected to carry appropriate cross section lead lines and label “V-V” replacing “C-C”. Reference numeral “400” initially shown in *FIG. 3* is added at top right of *FIG. 4* with underline to make it clear that *FIG. 4* is about “centrifuge 400”. *FIGS. 5-10* are original drawings with better resolution. No new matters are added.

Conclusion

Applicant now believes all the pending claims 1-2 are in condition for allowance and respectfully requests the Examiner timely pass this application for allowance.

Respectively submitted,

Date: April 20, 2007
